# EDUCATION

### University of Washington

Seattle, WA

GPA: 3.98, Intended B.S. Computer Science

June 2026

#### Experience

### Art of Problem Solving

June 2024 - Current

SWE Intern

San Diego, CA

- Migrating the AOPS Academy Website from an old PHP framework to a new NextJs and Fastify design.
- Implements an online placement exam with **Typescript** used by 12 physical campuses and 20,000+ students.
- Used Strapi, Jest, and Storybook to ensure codebase scalability and easily generate new content for sites.

#### Advanced Robotics at UW

Sept 2023 - Current

Controls Software Team

Seattle, WA

- Refactored Sentry robot code in C++, implementing substantial enhancements for improved functionality.
- Maintains Taproot, an open-source framework for Robomaster robots, used by most teams within the US.
- Won 1st place out of 20 teams in all RoboMaster competition formats inside North America 2024.

# Department of Homeland Security

June 2023 - Aug. 2023

SWE Intern

Washington D.C.

- Performed an in-depth research study evaluating the precision of Vicuna-GPTQ in document processing, leveraging 74 distinct prompts for comprehensive assessment.
- Improved the accuracy of Large Language Model(LLM) document processing by 30+% integrating a **ChromaDB** Vector Database, demonstrating the applicability of LLMs for document processing and information retrieval.
- Created the baseline framework in **Python** for future information retrieval research within the OCIO DHS.

## Fweefwop Cybersecurity

May 2021 – June 2022

Software Engineer

Cupertino, CA

- Ran a Capture the Flag competition with 600+ participants from 28 countries, and 40,000+ submissions.
- Developed 15 web problems with unique exploits using PHP, Python, Javascript, SQLITE, and more.
- Set up **Docker Containers**, giving each individual problem its own secure environment.

### Identifying NEOs in NASA WISE data using Tensorflow

June 2021 - March 2022

ML Researcher

Remote

- Used **Tensorflow** to identify 40+ Near Earth Objects (NEOs) within NASA's WISE database via an image subtraction technique that identified movement within different photos.
- Identified synthetic NEOs with 96% accuracy and real NEOs with 91% accuracy.

#### Projects

Spotify Recommender | Python, Flask, Scikit-learn, NextJS, React, Typescript, Tailwind

- Applied One Hot Encoding, MinMax, and Z-score to normalize columns of data.
- Used Cosine, Euclidean, and Manhattan distance formulas to generate vector embeddings for 12,000 songs.
- Built a frontend using **React**, giving users a graphical visualization of songs and their recommendations.

#### WildEye AI | Flask, Tensorflow, NextJS, React, Typescript, Tailwind

• Trained a model based on **Tensorflow** Inception\_V3 capable of identifying 90 different animal species from photographs with an 86% test accuracy.

#### Auto Reddit Video | Python, MoviePY

• Fully automatically generate text-to-speech Youtube shorts from Reddit posts, gaining 50k+ views across all platforms.

## TECHNICAL SKILLS

Languages: Typescript, Javascript, Python, Java, C++, SQL, HTML/CSS, Bash

Frameworks: React, Next, Vue, Nuxt, Tailwind, Tensorflow, PyTorch

Developer Tools: Git, VSCode, Visual Studio, Microsoft Azure, Firebase, Eclipse, Burp Suite

Libraries: Pandas, NumPy, Matplotlib, Scikit-Learn, SciPy, Seaborn, Strapi, Storybook

**Awards**: USAPhO Top 400 (2021, 2022), National Cyber Scholar (2022, 2023)
